SCHROTH Racing announces its patented ASM® system has been approved by the FIA for use in conjunction with HANS® device.

Danvers, MA, Sept 17 2008 – Schroth Racing USA and HMS Motorsport announced today that the ASM® system on Schroth 3 inch shoulder harnesses has been approved by the FIA for use with the HANS® Device.

ASM® is a patented technology from SCHROTH that helps to reduce the effect of submarining. SCHROTH ASM® belts currently in use are labeled “Not for use with HANS®”. This notice will no longer appear on ASM® belts. Customers who have already purchased ASM® belts, may now use them with their HANS® device under the FIA homologation.

Additionally, testing has shown that on the ASM® may be used on either the left or right shoulder belt regardless of the seating position without reducing the effectiveness of the ASM® technology.

For additional information on the compatibility of the ASM and Hans Device, contact Matt Long at HMS Motorsport or visit www.schrothracing.com. New tags with the updated information are already arriving in the USA. This press release can be duplicated for customer information purposes.

ABOUT HMS Motorsport- HMS Motorsport is the USA Importer for Schroth Harness belts. We are the number one Motorsport Safety provider in the USA for entities such as NASCAR, Formula One, Indy Car Racing, BMWCCA, PCA and the US Dept of Defense.
